QUESTION 2

Which statements did a Gartner study find to be true about SMBs? (Select two.)

- A. The majority of SMB servers are x86 architecture, with single-core or dual-core processor installations.
- B. SMBs tend to run on Linux, HP-UX, and Microsoft operating systems, in nearly equal numbers
- C. Approximately two-thirds of SMBs have external RAID
- D. Storage area network (SAN) penetration for small businesses is about 80%.
- E. On average, small businesses deploy 1 to 4 servers, while medium businesses deploy 19 to 22 servers.

Answer: AE

QUESTION 3

What must you determine first in order to select a server platform that meets customer needs?

- A. the number and type of applications the customer is running
- B. how many clients are networked
- C. how many simultaneous users are present and anticipated
- D. which applications are I/O-intensive and which are bandwidth-intensive

Answer: A

QUESTION 4

HP provides simple, affordable, and reliable ways for SMB customers to build and run their business. What is an example of this strategy?

- A. The HP SMB Servers program provides SMBs with scalable storage, data protection, and disaster recovery solutions that suit a wide range of needs
- B. ProLiant servers make it easy to integrate the heterogeneous environments often found in an SMB environment
- C. ProLiant servers, along with VMware ESX Server 3i capabilities, make it attractive for small businesses to transition to a managed environment
- D. Because SMBs favor standalone solutions. HP positions its hardware, software, networking, and services offerings accordingly

Answer: A
